

TYPE "T" SAFETY CLAMP

Type "T" Safety Clamp is designed for small diameter pipe 1 1/8" – 4 1/2" O.D. Each link changes the effective range approximately 1" in diameter. For sizes larger than 4 1/2" O.D., the Type "C" Safety Clamp should be used.

The same positive automatic gripping principle is used in the Type "C" Safety Clamp. It is ideal to help safeguard against dropping strings of flush joint tubing, to provide a shoulder to position strings of flush line pipe for welding, and other applications.
